

Essential Guide to Selecting Your 2-Way Radio Headset

*Single and Double denotes single and double protection. Both over the ear headsets limit in ear noise exposure to 82dB(A) Single protection should be used up to 105dB(A) and double protection above 105dB(A) and up to 120dB(A).

**Work Group Communications denotes the inclusion of a built in FM radio in the headset. When multiple workers program headsets to the same FM frequency they can communicate via PTT headset to headset at short distances without the need for a two way radio.

***IS denotes Intrinsically Safe certified. Sensear's SM1xSR(IS) is certified to UL, IECEx, Atex and CSA standards. Contact a Sensear Specialist for more details.

Each over the ear headset is available in headband, behind the neck and helmet mount variants.
